The idea of code4lib is intriguing.

I have managed mailing lists before, and I do not think managing  
another one  
would be too difficult. Here at Notre Dame we would call it a  
professional  
development opportunity. :-)

On the other hand, are you sure there is enough demand for another  
mailing  
list? Mind you, I've been previously proven wrong about this issue. A  
long  
time ago I did not want web4lib to come to life, but there certainly  
is a  
need for that mailing list.

How would code4lib compare to perl4lib, oss4lib, and/or xml4lib?

First, happy birthday. Second, I changed the subject line, hope that  
doesn't  
muck up your email reader.

On Thu, Nov 20, 2003 at 08:53:21AM -0500, Eric Lease Morgan wrote:  
> How would code4lib compare to perl4lib, oss4lib, and/or xml4lib?

code4lib would be for *any* language, not just Perl. People could  
discuss  
non opensource software (althought they probably wouldn't want to),  
and  
conversation will not be limited to XML. It will be a discussion list  
for  
programmers, who like programming in/for libraries or dealing with  
information sciencey things.

It might take off, it might not. If it isn't too time consuming to set  
up I think it's worth an experiment. I would set it up here if Follett  
would  
let me, but I've asked and they won't :( Sometimes i miss  
academia...actually  
more than sometimes.

Hi Eric,

I am no longer employed at Rice. My position was "eliminated due to restructuring", which is said to be a euphemism for being laid off.

I am working now at the University of Texas--Houston, School of Health Information Sciences as a systems analyst and sort of project manager. The rubric is health or medical informatics. My library training and experience does come into play here, though I will doubtless get to do things that I wouldn't get to elsewhere. Down the road there are also opportunities to collaborate with the HAM-TMC Library (the main library serving the Houston Medical Center institutions), so I won't be entirely absent from library work.

I've switched pretty much to Python, though I will use PHP for web development. Eventually I would like to do some Java (perhaps with Struts). I will probably choose to use Perl only for strong reasons (need to cooperate with others on a project, or needed libraries available only in Perl). Python is a much better fit with my brain than Perl is. I continue to be involved with perl4lib because I like the folks and the projects so much.

That's how I thought of perl4lib when I hosted it at Rice. The library administration apparently thought it (and me) dispensible.

> On the other hand, are you sure there is enough demand for another mailing

A long

> need for that mailing list.

I'm not sure there's a need. I really can't tell. A few years back, someone created a php4lib, but nothing seems to be happening there.

Ed

is more certain of the need for this list than I am. I would love a place to talk about other-than-Perl coding, but what if we build it and

they do not come?

> How would code4lib compare to perl4lib, oss4lib, and/or xml4lib?

I think code4lib would be analogous to perl4lib, except that its proper domain would be programming for libraries in languages other than Perl. Xml4lib deals specifically with XML-related matters, not all of them involving programming. Oss4lib seems to me more concerned with a sort of bigger picture--project management & design, open-source news & culture in the library, implementation of already-written open-source software. The same attributes that distinguish perl4lib from the others would also distinguish code4lib from the others.

> Eric "It's My Birthday Today; I'm 43 Years Young" Morgan

Happy birthday! I'm 44 years young, so I guess I'm younger than you are ;-)

If you make it back to Houston, let me know. We can have Vietnamese food if you like. We could also go to the range :)

Chuck

I'm fairly sure I could get permission to host it here, but I would  
have  
to do so on an Exchange server :-( Right now, I'm a Linux exile in  
MS-Land. I am pushing the virtues of open-source, and my supervisors  
are open to it, but it will take a while to make significant inroads.  
One of the first things I've got to do is get Linux on my desktop.

What do you guys think about the signal-to-noise-ratio problem, given  
that some subscribers would likely be interested in only one language?  
I'm omnivorous, so it wouldn't bother me, but I have noted that others  
are much more sensitive to this kind of thing than I am. This, and  
questions about extent of audience, seem to me the only two real  
problems.

I haven't seen a coding question on oss4lib in a long time, so I don't  
see a big problem with overlap. Correct me if I'm wrong about this.

Chuck

I also had a concern with the diffused approach as well, and I talked to Eric about that. If folks ask specific questions about, say, a Java implementation will there be a concentration of enough interested parties to address those sorts of issues? It seems like there is a danger of either being too general or too specific.

> is any interest in a "programming" list that is language agnostic?

Where'd I go? :)

Agreed that oss4lib has never really been about coding; the rare specific

questions on the topic have been for lack of a better home, and usually

redirected to a better home once the posters were informed (iirc usually

to perl4lib). Like web4lib and the lang4libs, oss4lib and the lang4libs

are mostly orthogonal, no?

This idea seems to come around once a year or so... it's always a hard call, as some folks are probably happy with the way certain lists are focused as-is. All I can say is that if somebody started a pan-language

code4lib I would want to join, even if the topics wavered inconsistently

on granularity and such. The occasional "how can I get perl to interpolate \$@#{[]}" as a footnote" is well worth the wading through for

me, not knowing, to get to the also occasional higher-level "if i'm parsing marc with a stream-based approach, would you put this callback here or there", etc., question or the rarer lower-level question in a language on my radar.

That said, I wouldn't start/own it myself, but would happily be a backup

listadmin if needed.

Also, btw, I would ask for restraint before cross-posting a potentially

flamewar-inspiring question -- however pertinent and well-meaning! -- to

multiple lists with inconsistent overlap. :) One alternative might be to invite members of various lists to participate in a discussion somewhere else... /u/l/i might be a neutral option, say, along with others, but really, anyone's weblog + comments would probably do just fine.

Dunno if these comments are helpful, esp. as I fell into this thread mid-conversation, but, well, here you go.

Regards, -dchud

Yeah, perhaps the best thing to do is just start it, announce it, and  
see  
if anyone comes. One thing I don't miss about academia is the  
incessant  
debate, and not enough action.

Ed I'm afraid I must take issue with your last remark. As someone  
currently working in "academia", I can't say I agree. And I feel we  
must resolve this issue before we can move forward.

Chuck

Sorry, couldn't resist.

Seriously, I was thinking that code4lib would be for non-Perl discussions (though discussion of Perl as a possible solution to a coding problem should be allowed). Perl4lib already provides an excellent venue for Perl-related discussions, and I wouldn't want to siphon off any of its lovely "wort" (you'll know the term if you brew beer). An idea floated in the past on this held that language-specific lists could be spun off as warranted by traffic. My notion was that code4lib would be a catch-all for discussions having no better home on other lists.

I do like Dan's suggestion that discussions likely to start protracted debates be steered to a blog-like venue. Possibly the function of a designated moderator to suggest that possibility (and the venue?) when the threshold is reached?

Chuck

As my third-level quote below indicates, I've worried about this issue as well. My hunch is that both Python and Java would find at least some takers. PHP probably would as well, but there is already a php4lib list (though it seems long dormant).

I'm leaning towards the notion that it is worth trying. If it doesn't seem to work out, we can declare it an experiment and shut it down.

Does that sound reasonable?

This sounds great to me. I think Eric and I would be willing to host it here at ND, but Eric would need to confirm that.

Rob

We've lost Dan and Rob on this thread too now. Chuck, would you be  
willing to post a message to the various groups xml4lib, oss4lib,  
perl4lib, php4lib (i think there is one), maybe a lita list, to see if  
there  
is any interest in a "programming" list that is language agnostic?

//Ed

Let's go for it.

Here at ND we will instigate a code4lib mailing list. Initially Rob and I

will be moderators. We'll give it a try for eighteen (18) months, and after

that time if there does not seem to be enough interest to keep the whole

thing alive, then we will shut it down. This is no real skin off our backs.

We'll call it a "professional development opportunity", and it may very well

fill a useful purpose as well as fill a void.

Let me set things up. It usually takes a day or two.
